

CPI Ltd announces the acquisition of Robix Ltd, UK

Effective 25th of January 2006

ROBIX LTD, Braunton, UK, has established itself as probably the world's leading manufacturer of high-tech polymer materials and has developed unique processes to generate an interesting range of shapes in special polymer alloys with exceptional properties.

Robin Wilson, Managing Director of CPI stated "this acquisition is broadening our available range of shapes, polymers and compounds as well as diverse applications into other fluid machinery industries. CPI is now in a stronger position on the compressor components market by offering it's customers a wider range of products with an excellent reputation while increasing its opportunity to reach new customers."

Merging this facility with CPI's worldwide sales force, along with its pro-active Research and Development team assures CPI of its continued leading position as we continue to develop and extend the capabilities of our special polymer alloys to satisfy the increasing demands of the compressor industry, and also to facilitate the development of totally new materials and moulded products to provide solutions within a diverse range of industrial applications.

CPI Ltd

CPI is already recognised as the acknowledged leader in the design, manufacture and application of special polymer alloys for use as piston and rod packing rings in the reciprocating compressor industry.

CPI's facilities include a unique compression moulding plant in the UK which is responsible for the manufacture of a range of proprietary self-lubricating materials which have been widely and successfully applied in both oil-free and lubricated compressors, and which represent the best currently available in the industry.
